

Currency Power Indicator - Manual Guide

1. Installation:

- Unzip the product's package, you will see the "Currency Power Indicator.ex4" and "Currency Power Indicator.ex5" files.
- Go to MT4 or MT5 data folder by opening MT4/MT5 terminal -> Main menu -> Files -> Open Data Folder.
- Copy .ex4 or .ex5 file to directory path: /[data folder]/MQL4(5)/Indicators/. Go back to MT4/MT5 terminal -> Main Menu -> View -> Navigator -> Right click on Indicators folder -> Refresh -> Find "Currency Power Indicator" -> Double click or drag it the the chart that you want to work with.
- At startup window -> Common tab -> Enable "Allow DLL imports" and "Allow live trading" check box.

- Switch to Input tab, enter your registered email address and activation key in order to activate your license. You just need to enter your license for each account at a particular MT4/MT5 one first time. It will remember your license info, so just leave the license blank next times.

2. Indicator interface:

3. Suggested strategy:

- Strategy with this indicator is very simple: Look for a strong-side currency and a weak-side currency, so that the difference of power between them is larger than 5. Then trade the pair between them. For example: AUD is -3.8 and USD is +2.5 $\Rightarrow 2.5 + 3.8 = 6.3 > 5$ (Sell AUDUSD).
- Best time to trade (for day trader): London session (Trends are usually start and develop from this session).
- Time avoid to trade (for day trader): New York 2nd half-part session (Trends are usually exhaust and may reverse in this half-part session, although there may be still a big difference between the strongest and the weakest, just wait until the next day).
- Note: This indicator real-time analyzes the current price of currencies in selected period, so you will see that the power of currencies is usually neutral at the beginning of period (day, week, month). Then, it will diverge over the time; this is the point for you to know when a currency start to volatile in the market.
