

Trade Reporter - Manual Guide

1. Installation:

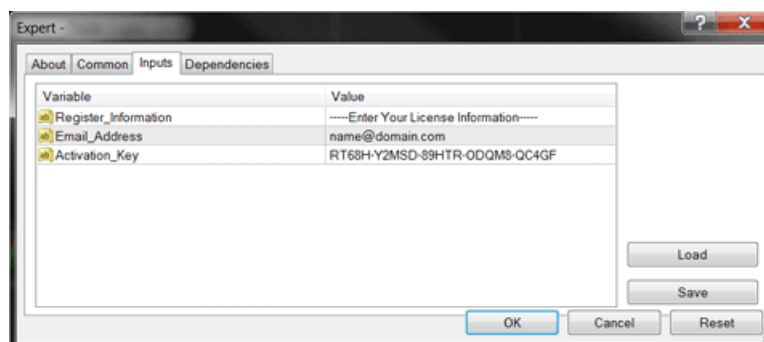

- Unzip the product's package, you will see the "Trade Reporter.ex4" files.
- Open your MT4/MT5 platform -> Main menu -> Tools -> Options -> Expert Advisors -> Enable "Allow automated trading", "Allow DLL imports", "Allow WebRequest for listed URL", and add URL "http://register.autofxpro.com" as following:

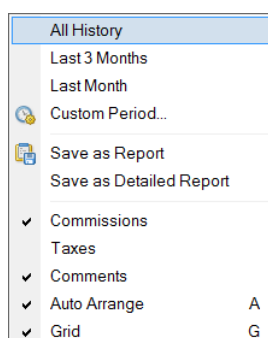

- Go to MT4 or MT5 data folder by opening MT4 terminal -> Main menu -> Files -> Open Data Folder.
- Copy .ex4 file to directory path: /[data folder]/MQL4(5)/Experts/. Go back to MT4 terminal -> Main Menu -> View -> Navigator -> Right click on Experts folder -> Refresh -> Find "Trade Reporter" -> Double click or drag it the the chart that you want to work with.
- At startup window -> Common tab -> Enable "Allow DLL imports" and "Allow live trading" check box.

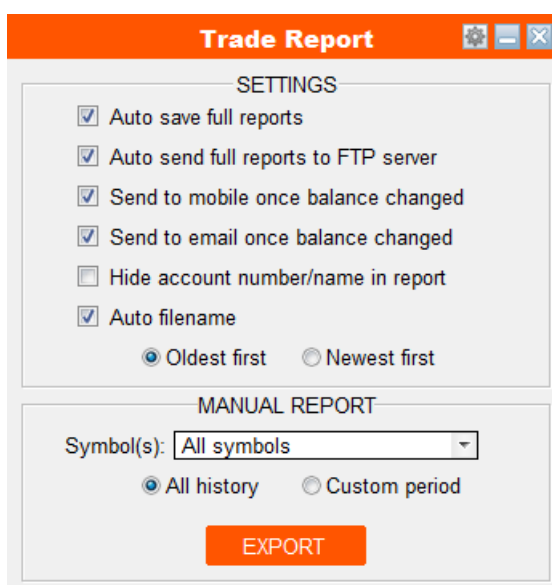

- Switch to Input tab, enter your registered email address and activation key in order to activate your license. You just need to enter your license for each account at a particular MT4/MT5 one first time. It will remember your license info, so just leave the license blank next times.

- Then, go to Account History tab in Terminal window of your MT4, right-click and choose "All History". DO NOT choose any other custom period here (custom period should be chosen from within the tool).

2. Setting options:

- Auto save full reports:** Report files (HTML & CSV) will be auto saved and updated once there is change in account history.
- Auto send full reports to FTP server:** Report files (HTML & CSV) will be auto uploaded to your website through MT4's FTP server settings. HTML file will be rename to index.html on your website in order to direct access by its www directory. Example: You upload report file (index.html) to www.yourwebsite.com/myreport/ , then you can access or share the report with the link www.yourwebsite.com/myreport/. A sample of uploaded report can be viewed [here](#)

- **Send to mobile once balance changed:** Send notification to your mobile phone once balance changed. This must be setup in MT4's Notification setting (Menu -> Tools -> Options -> Notifications).
- **Send to email once balance changed:** Send notification to your email address once balance changed. This must be setup in MT4's Email setting (Menu -> Tools -> Options -> Email).
- **Hide account number/name in report:** Hide information about your account number and account name in the report, they will be shown as * marks.
- **Auto filename:** If checked, report files will be named automatically based on the broker's name and account number. Otherwise, you can enter a custom filename as you want (without extension).
- **Oldest first:** The oldest trade activity will be at the top of the detail report (this option may make report progress faster).
- **Newest first:** The newest trade activity will be at the top of the detail report (this option may make report progress slower).
- **Send to email once balance changed:** Send notification to your email address once balance changed. This must be setup in MT4's Email setting (Menu -> Tools -> Options -> Email).
- **Symbol(s):** Choose which symbols will be taken to report. Please note that if not all symbols are chosen, the report is just a simulated performance, not a true report. This is used to analyze the effect of single/group of symbols and to imagine the result if only those symbols were traded.
- **All history:** All history will be reported.
- **Custom period:** Set a custom period to report. Please note that custom period must be set here, the MT4's History tab should be always set to All history.
- **Export button:** Click this button when you want to report manually. Full report files (HTML & CSV) will be exported and a quick summary report window will be opened inside MT4 simultaneously.
